

Venture RV Sonic X

The completely self-sustainable Sonic X pushed all the buttons expected when it debuted as a prototype last year. Said Dave Boggs, Venture RV general manager, "We knew we had something unique, so we put a couple of questionnaires up on our website, asking owners what they thought were the most important considerations to go off-grid, and the response was huge."

The Sonic X is now available in two floorplans, both of which offer a single streetside slideout. The 26-foot, 11-inch SN220VRBX features a rear bath, and the SN211VDBX

incorporates rear twin beds into its 26½-foot length. Both floorplans have a Murphy bed tucked into the forward wall, pass-through storage, a 12- or 14-foot LED-illuminated power awning, 6-gallon gas/electric DSI water heater, residential-style radius shower, USB charging, LED TV, external mounts for a kayak (rear) and bikes (front), and Venture RV's exclusive wireless leveling system.

Said Aram Koltookian, parent company KZ RV's president, "We upgraded the [NDW/Clearsource] water-filtration system to truly be a one-of-a-kind system that will draw water up to 75 feet away from a 6-foot drop."

Both Sonic X models feature 15-inch off-road tires, rock guards and a trademark tubular "Nerf bar" bumper system. It utilizes four 100-watt roof-mounted solar panels, a 2,000-watt inverter and a hidden fishing pole/gun rack and safe. Both models are priced at about \$47,000 MSRP and have a 7,000-pound GVWR.
